

BACHELOR IN “PSYCHOLOGY”

LEARNING OUTCOMES

By the end of the study programme the students will be able to:

- demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in psychology.
- understand and apply basic research methods in psychology, including research design, data analysis, and interpretation.
- use critical and creative thinking, skeptical inquiry, and, when possible, the scientific approach to solve problems related to behavior and mental processes.
- apply psychological principles to personal, social, and organizational issues.
- weigh evidence, tolerate ambiguity, act ethically, and reflect other values that are the underpinnings of psychology as a discipline.
- demonstrate information competence and the ability to use computers and other technology for many purposes.

PROFILE “MENTAL HEALTH”

- articulate an understanding of development and how these experiences impact mental health;
- synthesize an understanding of group interactive processes and dynamics that will enhance good behavioral health and wellbeing for the group participants.
